

**Do you have sensitivity problems in your immunodiagnostic assays?
ANANAS Nanotech has the solution for you !!!**

ANANAS Nanotech offers kits and reagents for the secondary detection of IgGs in immunodiagnostic assays such as ELISA and Western Blots, allowing you to obtain a much greater sensitivity in the detection of your analytes by simply integrating our products in your currently in-use immunodiagnostic assays!

Also, if you need to detect particular, uncommon analytes, or if you are unsatisfied with the sensitivity of the kits that you are currently being using, ANANAS Nanotech can manufacture customized reagents for your needs!

Our service includes the biotinylation of your/custom antibody or antigen, performance validation, and protocol assessment for the integration of the ANANAS nanoparticles in the assay.
